VideoWall - Aluminium profile

172.0020 VideoWall - Aluminium profile 2000 mm

SmartMetals developed this custom aluminium profile especially for VideoWall - wall and floor applications. The aluminium extruded profile is offered in the full length required for each row of displays; in one piece or multiple pieces incl. connection sets. For weak or uneven walls an installer could opt for us providing two aluminium profiles per row of displays (with additional wall brackets). This to create a perfect flat mounting surface for your VideoWall with an extra strong construction. The profile offers slots through which the wall brackets and display mounting arms easily slide from left to right, to simply approach horizontal alignment.
